

### Worsening Crisis

All the animals pictured in this brochure, and many more of our most cherished species are in danger. Due to habitat destruction, loss of biodiversity has reached proportions that define this time as the greatest Extinction Event since the disappearance of the dinosaurs. Also, despite decades of conservation messaging, poaching is at an all-time high. Poaching is killing off our most treasured species. For example, on average: 3 Tigers per week, and 50 Elephants, 4 Orangutans, 3 Rhinos and 2 Giant Pandas, are illegally killed each day! We have lost 98% of many populations. 25% of *all* wildlife species are threatened with extinction within our lifetime. Too many people have been ignoring this problem for too long. Today's children are the last generation that can save the many species of exotic animals that we all know and love... for time is running out. Saving species preserves the Web of Life on which we all depend. Kids can make a difference.

# ANIMALS

## NEED MORE FRIENDS

This boy, Daniel, with his brother, William, two of our International A-Team Members, has raised \$720,000 to help save orangutans!

### ENDANGERED SPECIES

### SCHOOL ASSEMBLY PROGRAM

A-Team For Wildlife "Serves youth saving endangered species". Our School Assembly Presentation on Endangered Species teaches natural science, as well as empathy, and personal responsibility for natural resources.

**CONDITIONS**

*Recommended audience size: up to 60 students*

*Presentation length: 50 minutes*

*Projection Screen & shades required.*

*Allow 1 hour for setup and ½ hour for pickup.*

*Deposit required: 50%*

*Scholarships for discounted rates available.*

*Travel Fee may apply. Inquire.*

*Grades: 3-6, 6-9, 10-12*

\*An environmental education non-profit serving youth saving endangered species.

# “Animals Need More Friends”

Our Presentations are dynamic, exciting, and leave a lasting impression. These are multi-media assemblies that deliver more than great science, amazing nature, and a fun time. This is an Assembly Program that helps students understand and appreciate the importance of concepts like "empathy", "kindness", "responsibility", and "stewardship".

Environmental topics like biodiversity, habitat loss, sustainable development, natural resources, carbon sequestration, micro-climates, and interdependency, are explored. Poaching, IUCN Red List threatened and endangered status, and the roles of zoos, preserves, and parks, are explained. Specific species are discussed in depth as examples of endangered animals. The value of professional conservationists and related career paths is described. STEM and standards compliant. These topics are adjusted appropriately according to audience grade level.

In this new age, young people are not only participating, but leading the way. We will show your students that each one of them makes a difference. We discuss the community service ethos and the need for student leadership. Outstanding young role models in student conservation are presented to inspire.

Our Regional Presenters are available for unprecedented followup. They can help you setup action teams after the assembly, what we call, Local

A-Teams, to help students put into action the things they have learned. A-Teams are a wonderful way to tap into young people’s innate love for animals and see kids develop their leadership skills. We want to be not only informative, but effective. In partnership with you, we are here to...

*“Synergize!”*
